

Solution Brief

Automation CICD Pipeline Discovery Workshop

Automation is not just a buzzword. Capable of forming the foundation for major efficiencies, process improvements, and cost reductions, automation tool sets are critical for organizations looking to modernize IT and maintain a competitive edge.

Insight's Automation CICD Pipeline Discovery Workshop helps your organization identify potential use cases for automation across your IT operations and form the foundation for a successful Continuous Integration and Continuous Delivery (CICD) practice.

This half-day workshop includes discussion, breakout sessions, and whiteboarding.

Learn how to leverage application development teams' current workflows and processes to create a CICD pipeline into an automation platform stretching across two key areas:

- On-premises infrastructure
- Public cloud infrastructure

Explore options for workflow automation tool sets, cloud management platforms, and DevOps tool sets and models

Identify transformation strategies to bridge the gap between infrastructure and application teams to create a CICD pipeline

Participate in breakout sessions with infrastructure and application owners

You'll walk away with a customized estimate for implementation services by Insight's Professional Services team. Other available strategy workshops in this family of assessments include NSX-T Strategy, vRA CICD Pipeline Workshop, and Infrastructure Optimization.

Why Insight

Professional Services for
20+ years

National delivery team

~1,500 projects per year

>100 PB of data and
>400,000 workloads migrated since 2015

~\$1.5B cost savings identified for clients
